Heat exchanger GT500, supercharged mustang.

Special introduction price, per 01-06-2014 the price will be € 299,- excl VAT.

De biggest thrad with supercharged mustangs is heatsoak due to the raised temperatues of compressed air from the supercharger. To avoid this you'll need to cool down your compressed air as much as you can, we suggest installing the Afco heat exchanger and additionally our upper grill heat exchanger, this one is mounted " inline" with the rest of the intercooling system behind the upper grill and take full advantage of the cool air, which come from just driving the car.

Our heat exchanger is made from lightweight aluminum, TIG welded and produced in The Netherlands, the weight including an additional 250Ml cooling fluid is only 1.5KG. The measurements are 65x 16 x 3.5cm and test results can be found here; <http://www.lekimportcars.nl/en/modification-tuning/intercooler-heat-exchanger>

Installaiton time is approximately 3 hrs, you do need to remove the front bumper but it only simple handtools are required.
